

EyeGlaze UI Color Palette Guide

This document defines the official EyeGlaze luxury UI color palette and explains where each color should be used throughout the mobile app and website design.

Color Name	Hex Code	Usage
Deep Charcoal Black	#0B0B0C	Main app background, dark theme base
Soft Dark Gray	#131314	Cards, sections, product containers
Elegant Gray	#2A2A2D	Borders, dividers, subtle separators
Matte Luxury Gold	#D4A04D	Buttons, icons, highlights, premium accents
Warm Gold Shade	#C8923E	Hover states, active icons, selected tabs
Soft White	#F2F2F2	Main headings and important text
Cool Gray	#A7A7A7	Subtitles, descriptions, secondary text

Design Notes

- The EyeGlaze UI should maintain a luxury dark theme using charcoal black instead of pure black.
- Matte gold should be used only for premium highlights and interactive elements to avoid overuse.
- Product images should use dynamic backgrounds depending on frame color.
- White and gray shades should maintain readability and reduce eye strain.
- The overall UI should feel modern, premium, minimal, and eye-comfort optimized.
